

Sales Performance Dashboard

Global Superstore · Power BI Analysis · 2011–2014

Project Overview

This report documents the Global Superstore Sales Dashboard built in Power BI. The goal was to turn four years of raw transaction data into a clear, visual story about how the business was performing — across categories, regions, customers, and time.

Tool	Power BI Desktop
Dataset	Global Superstore (CSV / XLSX)
Period Covered	2011 – 2014
Report Author	Khushi

Objective

To analyse sales, profit, customer behaviour, and category-level trends in a way that could support real business decisions. The dashboard needed to be readable at a glance for a non-technical audience, while still having enough depth for someone digging into the numbers.

Dashboard KPIs at a Glance

\$12.6M	\$1.47M	25,035	11.61 %
Total Sales	Total Profit	Total Orders	Profit Margin

Dashboard Features

KPI Cards

- Total Sales** Aggregate revenue across all orders and regions.
- Total Profit** Net profit after costs, across all categories.
- Total Orders** Count of individual transactions in the dataset.
- Profit Margin** Profit as a percentage of total sales.

Visualisations Included

Profit by Category — Bar chart comparing profit across Technology, Office Supplies, and Furniture.

Annual Sales Trend — Line chart showing yearly revenue from 2011 through 2014.

Top Customers — Ranked view of the highest-revenue individual customers.

Top Revenue Regions — Geographic breakdown of where sales were generated.

Category Sales Distribution — Proportional view of each category's share of total sales.

Interactivity

The dashboard includes slicers for Region, Category, and Year so the audience can filter down to the segment they care about without needing to read multiple static charts.

Key Insights

These are the main things the data actually showed not just the features of the dashboard, but what a business reader would take away from it.

Technology leads on profit

Technology was the strongest category by profit at \$0.66M. It outsold Office Supplies and left Furniture far behind.

Four years of steady growth

Revenue climbed from \$2.3M in 2011 to \$4.3M in 2014 roughly doubling in four years with no visible dip.

Furniture is a concern

Despite having sales volume, Furniture delivered the lowest profit margin of the three categories, suggesting cost or pricing issues.

Margin held across growth

The overall profit margin sat at 11.61% and stayed relatively stable even as sales volumes grew a healthy sign.

Business Recommendations

Based on what the data showed, here are four areas worth acting on.

1

Double down on Technology

It's already the profit leader. Expanding the product range or investing in Technology marketing is likely to yield a strong return.

2

Investigate Furniture margins

High sales volume with low profit usually means either pricing is too low or costs are too high. A category-level cost review would clarify which.

3

Focus on top-performing regions

The top revenue regions are driving a disproportionate share of sales. Those markets are worth protecting and growing before expanding elsewhere.

4

Keep an eye on margin as you scale

Sales are growing well. The risk is that operational costs start eroding margin at higher volumes worth tracking on a rolling basis.
